

**PRODUCT HIGHLIGHT: THE HELIWAGON**  
NEDAERO is **AUTHORIZED** distributor for the Heliwagon**Remote Controlled Helicopter Landing Dolly**

The Heliwagon remote control landing platform offers a stable and safe landing surface option for light and mid-sized helicopters. The platform replaces the standard tug dolly and GPU to move the aircraft in and out of confined spaces or hangars. Heliwagon platforms are capable of making 360-degree turns. Pilots can maneuver the platform into the most advantageous takeoff or landing position in minutes and can directly land on the HeliWagon and then use a remote from the hangar or the cockpit to transport in and out as needed. The Heliwagon enables 360 degree walk around visibility, has an onboard charger, commercial grade batteries and powder coated frames for durability. Recessed lighting provides a safe landing in low light situations and the landing lights are easily controlled from the remote control. Up to 8.000 lbs and 15.000 lbs.

**If you want to experience the Heliwagon yourself,  
please contact NEDAERO**
